To whom it may concern

We are a well known can maker in Turkey and are producing cans for food and technical products in three plants and in all different sizes from 150 g to 30 kg.

Among other machines we have, in the last 4 years, purchased also 2 CM 16 and 3 CM 17 welders.

All CAN MAN machines are working continuously with full production and have had so far no technical problem, whatsoever, and are very much satisfied and happy that we have purchased those welding machines from Can Man.

We have also received full cooperations and after sales services if needed and can recommend Can Man to you, without any restriction. CAN MAN welders, as our experience with the machines proved, are working without any problems, and there are many detail-advantages compared with competitors welders.

The change over time for the tools are much less, the roll formers and stackers are free of any maintenance, there is less acoustic emissions and the servicemen can easily have access to the parts of the machines thanks to less complicated technology.

We enjoy excellent business relations with CAN MAN, which is a major factor, and we consider CAN MAN to be a reliable partner, always ready to assist whenever required.
