

X8

CAN MAN

WWW.X8.CANMAN.CH

X8 at a glance

- 1 Most compact WeldCENTER™ on the market.
- 2 Easy, fast and safe operation due to smart empowering features.
- 3 Lowest running costs because of the simple design leading to less wear and tear.
- 4 Highest quality in parts and service for reliable production.

SmartCONTROL™

A powerful I-PC (industrial PC) in combination with an advanced software eliminates the limits of PLC's (programmable logic controllers) and boosts the handling and monitoring remarkably, worldwide wireless access included.

PACEMAKER™ 2

This compact static welding inverter combines up to date digital processor technology for a very safe and easy to use operation with a remarkable power boost as a side effect. The unit is equipped to all fully automatic Can Man welders but can also be used to upgrade other types and brands of welders.

QuickChangePLUS

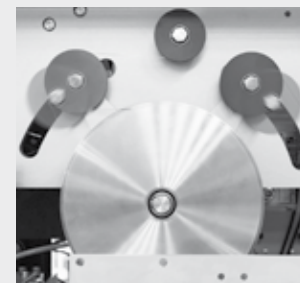

As a logical consequence of the Can Man mission to fastest canformat changes, changing the canbody height with the X8 is a matter of seconds. With an AC linear servo drive (patents pending), mechanical components (and wear parts!) are impressively minimized.

Softwire

Our wire drive system measures the speed of the wire through the tension in the wire loop. Therefore, it is not necessary to finetune anything after regrooving and the wire cannot break due to mishandling. An overlacquering control system further protects the wire from breakage.

Integrated PowerCURE for Powder Application

The direct integration of the induction curing system leads to the most compact welder-curing-combination. Canbodies are transported scratch-free in hanging position by magnetic belts with no risk of damages for the belts or coil due to a jam in the downline.

Technical Data

X8 Low Speed Welding Bodymaker

Production Output	80 cans/min, 24 meter/min
Body Sizes	min. Ø 99 x h 50 mm max. Ø 330 x h 540 mm
Sheet Thickness	0.19 / 0.22 - 0.38 mm
